The Flint River and its tributaries form a watershed spanning approximately 1,332 square miles of southeastern Michigan. This is a part of our state’s largest watershed – the Saginaw Bay Watershed. The main river and its basin, at 142 miles long, covers most of Genesee and Lapeer counties while touching five other counties. Major tributaries of the Flint River include the South and North Branches, and the Kearsley, Thread, Swartz and Misteguay Creeks. The Flint River flows through Lapeer, Flint and heads North to the Shiawassee National Refuge where it joins the Shiawassee River. The Shiawassee, Tittabawassee and Cass Rivers converge, becoming the Saginaw River, and they complete their journey in the Saginaw Bay of Lake Huron.

SAFE PADDLING TIPS

River conditions are always changing, and high water can be dangerous. Check conditions and local weather reports before launching. Users have primary responsibility for their own safety.

• State law requires a Coast Guard approved life jacket be present for each paddler and that children 6 years of age or less wear a life jacket at all times while on the water. It is strongly recommended that all paddlers wear a properly fitted life jacket while on the water.

• Be prepared. Always pack a first aid kit, whistle and a signaling device.

• Paddling is safest with a partner. You should always tell someone on land your trip plan including location, how many in your group and when you expect to be off water.

• Be aware and respectful of the boundary lines for public and private properties. Users are responsible for following all posted rules.

• Help preserve the river and its resources for future generations by carrying out all trash and items that you take in. Leave all wildlife and vegetation as you found it.

• Wash your boat and equipment before entering another body of water to prevent the spread of invasive species.
For information on float times, paddle rentals and guided tours, contact the Flint River Watershed Coalition at 810.767.6490 or flintriver.org
