# WATERSHED WONDERS 3P LEARNING PROGRAM

Come experience a 3-P learning curriculum that contains over 20 hours of watershed curriculum for grade levels 5-12. Originally designed for out-of-school time programs, this curriculum also extends the learning happening in the classroom, too.

This PD guides facilitators through activities and community connections that build on each other. It provides youth with immersive, exemplary watershed STEM education experiences that enhance classroom learning objectives and elevate youth voice in a fun and supportive setting. With this curriculum, youth will:

- Engage in exploratory games and hands-on activities aligned with NGSS science standards. Collect and analyze biological, physical, and chemical water quality data.
- Meet with community members with interest in water quality.
- Partner with community organizations to design and implement an action project.
- Carry out an action project and reflect on the experience.

**A stipend of \$150 is available for educators who complete the full training  
Lunch will be provided. Space is limited.**

Saturday, May 2nd 2026  
9:00 - 3:30 PM at For-Mar Nature Preserve,  
2142 N Genesee Rd, Burton, MI 48509
